ICIS Awards \$25,000 to Columbia Shuswap Regional District

Columbia Shuswap Regional District received **\$25,000** through the CivicSpatial Grant Program to help increase the accuracy, consistency, and currency of spatial data shared with ICIS members.

Over the next two years, Columbia Shuswap Regional District will work in partnership with GeoBC's Parcel Fabric Section to establish 100-150 GPS Cadastral Tie survey control points to improve the positional and relative accuracy of their cadastre. Enhancements will also be made to the attribution of land parcels with the use of the Master Parcel Table.

Upon completion of the project, approximately 22,000 parcels will be improved in relative and positional accuracy with increased conformity in attribution. The parcel fabric dataset will be repositioned to seamlessly match 4 municipal and 5 regional district jurisdictional boundaries. These developments will yield a higher quality parcel fabric dataset that will be delivered to ICIS members on a consistent basis.

All Local Government members of ICIS are eligible for CivicSpatial Grant funding. For more information on the types of projects currently supported by the program, please visit the [ICIS website](#) under [CivicSpatial Grant Program](#).

ICIS is a non-profit society created to collaboratively share and integrate spatial data for the economic and social benefit of British Columbia.
