## **ICIS Receives Special Recognition at GITA's Pacific Northwest Annual Fall Conference**

In the spirit of collaboration, ICIS participated in GITA's Pacific Northwest Annual Fall Conference on the Future of Smart Technology last month. At the conference, ICIS received special recognition from [Geoff Zeiss](#) for its work on creating a common shared database of utility and cadastral data for the province of British Columbia. He wrote an informative article about ICIS "[GITA PNW: Sharing Cadastral and Utility GeoSpatial Data in British Columbia](#)" and it is well worth the read.

ICIS is well known within British Columbia and familiarity with ICIS is growing beyond provincial borders. ICIS is often admired by other organizations and groups for its uniqueness. ICIS is a non-governmental and non-profit Society supported by its members to create, integrate, and maintain a timely, accessible, and accurate province-wide spatial database. Membership is entirely voluntary. Over 200 organizations and jurisdictions contribute GIS data to ICIS resulting in a multi-layer geospatial fabric accessible to all ICIS members. ICIS results are achieved through collaboration and trust.

Thank you to all ICIS members for your continued support and for making ICIS what it is today.

For more information on ICIS Membership, contact Ken Rigler, Membership Coordinator or visit the [ICIS website](#).

ICIS is a non-profit society created to collaboratively share and integrate spatial data for the economic and social benefit of British Columbia.
