## **DGeoShare... Unchained**

On April 4, Barry Logan, Steve Mark, and Paul van Nieuwkuyk presented ***“DGeoShare... Unchained”*** at the FME World Tour, hosted by Safe Software. The day was filled with tips and best practices, information on the new FME 2013 release, and information on how other organizations have used FME to navigate data challenges.

***“DGeoShare... Unchained”*** gave the Why, What, and How of GeoShare, and the role FME has played in its implementation and success. If you are wondering about the odd title, Barry, Paul and Steve took a few liberties and leveraged the name and theme of a very popular, recent movie to add a little levity to their session.

ICIS would like to thank Safe Software for inviting the ICIS Team to this event, as it was a great opportunity to not only share the ICIS story, but to learn how the future of FME will assist ICIS in the coming year.

Miss the presentation? Check it out [here](#).

## **DGeoShare, Defined**

(The 'D' is silent... it stands for 'Data')

### **geoshare [jee-oh-shair]**

(noun)

1. An FME-powered data brokerage infrastructure connecting ICIS data providers and consumers.
2. Regular and automated services for data extraction, publication, standardization, quality control, and reporting.
3. Feature rich off-the-shelf, self-documenting customization, highly extensible, plays very well with others.
