

## About ICI Society

The Integrated Cadastral Information Society (ICI Society) is a leader in the sharing of geospatial information; driving collaboration, integration, adoption and use of spatial data for the social and economic benefit of British Columbia.

Incorporated in May 2001 and registered under the BC Societies Act as a non-profit organization, the Society works to facilitate collaborative integration of spatial data from Local Government, Provincial Government, First Nations and major Utilities in British Columbia.

As a single source for spatial data from multiple agencies, the Society strives to find collaborative solutions that improve data access, accuracy and consistency of address data for BC to provide value to Society members.

As an ICI Society Local Government or First Nations member your active participation in supporting the ICI Society vision is key to the success and value of the society.

Essential to this is your commitment to participate in data quality improvements for AddressBC for the benefit of all Society members.

To support AddressBC data quality improvement the CivicSpatial Grant program will provide a one-time grant of \$1,000 to eligible Local Government and First Nations members to improve the accuracy of submitted address data.

The value of these data quality improvements to AddressBC as an authoritative, real-time source for address information will continue to provide great value to other ICI Society members who rely on accessible, current and accurate address data.

### Our Members see Value in AddressBC Accuracy

Utility and Provincial Government members rely on current address data for effective decision-making to maintain and protect the vital services that they provide on a regional and provincial scale.

#### Utility members see value in AddressBC accuracy for:

- maintaining parcel and customer information.
- emergency response and records clarity.
- the delivery and maintenance of telecommunication services.
- keeping address records up to date with municipal changes.
- access to the most up to date addressing information from the authoritative source.
- one source for province-wide address data allows for better and faster service to customers.

#### Provincial Government members see value in AddressBC accuracy for:

- improvement of an essential source of civic address locations.
- improved planning and decision making, particularly in the areas of public safety, health, education and social services.
- coordination with GeoBC's transportation network used in emergency management and dispatch.

Project Type

Commitment to review, annotate and/or resolve address anomalies based on feedback reporting from ICI Society GeoShare Q/A and the DataBC's Provincial Physical Address Geocoder Q/A.

---

Project Deliverables:

1. Submission of address data via regularly scheduled GeoShare processes.
2. Completion of the AddressBC Addendum.
3. Receipt of AddressBC Q/A reporting (GeoShare Q/A reporting and the Physical Geocoder Q/A correlation reports) on a regular basis.
4. Integration of AddressBC Q/A reporting into in-house addressing workflows.
5. Resolution of errors and/or address anomalies identified in both the GeoShare Q/A report and the Physical Geocoder Q/A correlation reports.
